Kebon Jeruk, Jakarta Barat, 11520

Computer Science student focused on Database Technology. Proficient in SQL, Pentaho, Python, Tableau, and PowerBI through course projects. Possess good communication skills from organizational experience, seeking an internship opportunity to apply these technical skills in the real world.

Education

Universitas Bina Nusantara - Jakarta, Indonesia (September 2024- Now)

Computer Science

GPA: 3.92/4.00

- Awarded the **Dean's List 2026** in recognition of outstanding academic achievements earned throughout the previous year.

Work Experience

ASAK Kedoya Parish - Jakarta, Indonesia (February 2026 - Now)

Tutor

A social care movement in education under the Archdiocese of Jakarta (KAJ) that provides free tutoring to improve students' academic performance.

- **Developed learning materials and taught 9th-grade mathematics**, focusing on coordinate systems, geometry, and high school entrance exam preparation.
- **Assisted students in understanding complex concepts interactively**, contributing to improved comprehension and exam performance.
- **Enhanced communication, leadership, and time management skills** by managing effective and conducive tutoring sessions.

Organization Experience

EKM Community Events Committee - Jakarta, Indonesia (2025)

- Managed and structured comprehensive personnel lists to ensure strategic workforce allocation during large-scale community events and parades.
- Coordinated with cross-functional team members to streamline event logistics, scheduling, and on-site operational execution under pressure.
- Resolved operational roadblocks and optimized internal communication channels to ensure seamless event delivery.

Projects

Church Directory Web Platform (OMK Paroki Kedoya) - 2026

Full-Stack Web Development, Database Management, User-Centric Design

- Engineered **a full-stack web directory** to **resolve operational bottlenecks** by centralizing scattered member data and event histories into a unified system.
- Developed scalable system features enabling multiple organizational divisions to efficiently track member attendance and manage event role assignments.
- Orchestrated a **real-world pilot deployment** for community attendance tracking to validate system functionality prior to a full parish-wide rollout.

Big Data Analytics & Modeling within Cloudera Environment - 2026

Cloudera, Apache Hive, Basic SQL, PySpark, Seaborn

- Utilized the **Cloudera** platform to manage and query large-scale distributed datasets efficiently using **Apache Hive**.
- Developed Python notebooks powered by **PySpark** to execute optimized data transformations and basic machine learning algorithms.
- Created exploratory data visualizations using **Seaborn** to identify hidden patterns, trends, and anomalies within the processed datasets.

Data Pipeline Engineering & Star Schema Modeling - 2026

Pentaho Data Integration, Star Schema

- Built and optimized robust ETL pipelines using **Pentaho Data Integration (PDI)** to transform raw operational data into machine learning-ready datasets.
- Designed and implemented a structured **Star Schema** data model consisting of fact and dimension tables to enhance analytical query performance.
- Ensured high data integrity and seamless data aggregation across the pipeline to support advanced business intelligence needs.

Predictive Analytics & Streamlit Dashboard (Rossmann Store) - 2026

Python, Streamlit

- Executed end-to-end data cleansing and Exploratory Data Analysis (EDA) on Rossmann Store retail transaction datasets.
- Developed predictive machine learning models to forecast future sales performance.
- Integrated the predictive models into a dynamic web-based dashboard using **Streamlit** to visualize revenue forecasts.

Tableau Data Storytelling Dashboard (Maven Roasters) - 2026

Tableau

- Analyzed transaction records of Maven Roasters multi-branch coffee shops to detect consumer behavior.
- Designed unified interactive dashboards using **Tableau** with a dedicated data storytelling approach.
- Delivered structured insights on revenue trends, product mix stability, and peak traffic hours for stakeholders.

Software Development (Front-End Developer - Poestakas) - 2026

Front-End Developer, Git

- Contributed as a **Front-End Developer** by designing system **Use Case and Activity Diagrams**.
- Implemented responsive UIs for KUR loan calculators and an AI-driven business proposal manager with PDF preview.
- Conducted rigorous application testing on critical core modules to ensure system functionality.
